

Niagara Customer Loyalty Program

March 23, 2023

Q&A

1. Is R2 also included in the program?

Yes, R2 is now included in the program. For R2 licenses you must contact Tridium Customer Support (support@tridium.com) as the functionality in Niagara Licensing does not cover R2.

2. Are there plans to change from the N4 platform to a different platform? Will N4 be phased out? If so, when?

N4 currently runs on Java 8 which is almost a decade old. As you can imagine, Oracle, for example, pushed their own support plans for Java 8 and EOL is coming in 6 or 7 years. Tridium is serious about security so we cannot allow an unsupported version of Java to continue to run on our supported product. So, in advance of the EOL, Tridium will be migrating its Java versions and when we migrate Java version it typically comes with a new release.

3. Can you please provide the link for Loyalty Program T&Cs agreement?

The agreement can be found here: <https://pages1.tridium.com/Niagara-Loyalty-Program.html>.

4. Who signs the agreement? End user, contractor, distributor? How do you enforce the operation is complete? Or how does a Wholesaler enforce it?

I will get clarification from our counsel, but the organization that trades with Tridium needs to click through the agreement to accept. The person needs to have authority over the licenses for the host IDs being traded up as the traded in licenses will be disabled.

5. Will we still be able to download our programming laptop AX workbench licenses after July 1?

Yes, you will be able to email or download the license files.

6. Does this mean that a Demo PC will not have the AX license after July 1st? Demo Licenses purchased after July 1st will not have the AX toggle? Will the AX slider go away upon the next Demo license renewal?

Any new demo licenses purchased after July 1st of this year will not have the AX toggle button. They will only work in N4.

7. Is the aapup.jar module considered a standard Tridium driver?

Yes, it is a standard Tridium driver.

8. Does the loyalty program cover the device adders at initial purchase time, or just the "NC" core license part numbers?

It is just the NC core license part. You will need to add any device adders.

9. Will the existing modules work with the Jace 9000?

Yes, any modules working with the JACE 8000 will work with the JACE 9000

10. Will the N4 8000 series JACE be used for the next platform or will they need to be replaced?

The JACE 8000 is the current supported platform. Once the JACE 9000 is available, we will consider introducing a loyalty program.

11. Will AX Demo Jace and workbench licenses be left to expire or will they become permanent for migration purposes?

Demo licenses are contingent upon payment of reseller fees. If you do not pay the reseller fees, the demo licenses will not work.

12. Do you have a time frame for JACE 9000 release?

Currently in early access and beta testing. The plan is for it to be launched this year. The release will be based on feedback from testing.

13. We are currently beta testing 4.13, can we also beta test the 9000?

We have a limited number of beta units available so the JACE 9000 beta testing is currently closed. If we get any more beta units, we will open it up to other testers.

14. Is the JACE 9000 Footprint the same size as the JACE 8000?

Yes, it is the exact same footprint as JACE 8000.
